

Local experience, sectoral accumulation, first corporation establishment...

Almost 10 years of unrivalled experience and accumulation is combined with global technology and sentiment...

We supply PV (Photovoltaic) components still used in international market to our local users, executers, sellers and to distributors. Our company also has a position of excellent sales network and according to that has a unique local experience . We give professional consultancy service to land owners, business executives and investors.

We are authorized repretative in the field of solar panels, inverters, fixed- tracking systems, cable and connectors.

We supply certificated, qualified and reliable components to all areas of PV with our specialist and professional staff's excellent service to our partners and consumers.

We add our optimum value to our service and ascendant quality components with our experience advantage and share with our partners and consumers.

Training

We offer private training programs on project preparing, supervising on projects and project evaluation on Photovoltaic applications...

After identify your goals and demand, we help you to improve yourself and achieve your target with the most reliable and experienced trainers in that area of business...

Projects

Our higher educated and certificated Engineering Department is ready to give you their field knowledge and optimum reality solutions... Contact us for the newest and high quality PV components for your solar facility's planning and for the most realistic simulations.

Consultancy Services

We are in a very active and expanding area of solar industry in the world. We give consultancy service starting from wafer production to cell and module production areas. For PV Power Plants we give our consultancy service for; land development, pre-feasibility, license application preparing.

Land / Field Development

We inspect existing or new fields, and analyze energy potential, prepare a pre-feasibility report, and add our values to your consideration. We also offer fields to your consideration that was previously analyzed by our self.

Product and Business Development

We consider the data we collected from field for project preparing, researches and development periods. The most significant reason to improve our products and services are our local experiences and power of global sources. We enhance solar panel applications consistently to building installations. You can follow us for every news and betterment in Solar Energy and the sector...

Efficiency and Security

Losses are reduced to minimum, with improved production and application periods in our equipments. More energy means more profit and rapid returns. We disabled all negative factors caused by climate and environmental conditions. We take care of all theft incidents by developing and using high technological security systems.

Maintenance and operating

We are ready for all kinds of maintenance you need. We follow up your investment, performance and gain.

Quality Management

We do not have a customer or consumer, we have solution partners. We are on the same part that you are, we foresee all risks and provide information against, and then we share them with you. We assure you; we really love our job and care about it.

Foreign Trade

We share our technical and commercial knowledge and equipment support with investors in neighboring countries and nations in Middle East area.
