

OUR COUNTRY IS FULL OF ENERGY

Sun is the most important energy source of the Earth. Radiation energy of the sun is the primary energy source affecting physical formations in the earth and atmosphere system. Material and energy flows in the Earth are made possible thanks to the solar energy. As the solar energy is a clean source for the environment, it sets a serious native to the fossil fuels. Being a clear and cost-effective energy source, the most distinctive characteristic of the sun is that it is abundant and limitless. We see that real value of the solar energy is really recognized and widely used in the European countries. The biggest and Professional industrial organization in this field is, of course, CONERGY group.

Our world is full of energy ...

Conergy is committed itself to build a clean world as evidenced by the investments an technological R&D operations it has been performing in the field of renewable energy sources for years. Conergy group operates in 26 countries, 5 continents with operating references in these countries. Thanks to specialty and international experience of its team, Conergy has become a successfully and reliable brand worldwide. It has efficient products, extensive service backed by knowledge and sound know-how it gained the numerous facilities installed so far. It has also become a significant business alliance for the Professional plant installers, plant teams, operators, users and sale representatives.

In order to fulfill global customer requirements which vary locally, the information is constantly d and products developed. It develops product specifications and varieties depending on the market, application, requirement and target groups. You can absolutely have confidence in Conergy products and solutions. Because of its wide range of products and systems, it offers you renewable energy in any size you desire, the individual residences to the large plants.

Now our country is also full of energy ...

Conergy has added another one to the operations it performed. Conergy is now in Turkey! As well deserved by the potential of our country and its active position in the region, it shares its global experience and industrial specialty under roof of NORM ENERJİ now. You may surely get the most ideal solutions Norm Enerji which is based on the motto think global, act local, NORM ENERJİ. Thanks to cooperation of Conergy and Norm Enerji, we believe new horizons will also be set in the field of renewable energy for our country.

Our potential come into action ...

Norm Enerji Sistemleri continues its operations to inform the public about the existing energy potential of Turkey in the field of energy sector and to make the people conscious about how the renewable energy sources can be used. Another operation it perform for a conscious organization is to form the first and single sector-related civil organization in our country, GÜNEŞE ASSOCIATION. Full name of the Association is Association of Solar Electric Producers, Photovoltaic Industrialists and Businessmen. Our objective is efficient and widespread use of solar electric production for independency in the energy by putting into action our virgin natural sources. With social responsibility projects, we attach importance to and support seminary, training and promotion activities. We realize concrete projects about recognition by the public of the solar energy, the natural and renewable energy sources. Local and foreign positive s motivate us.

Real social responsibility ...

As it is known, the solar energy is clear and cost-effective; but, most importantly, abundant and infinite. In other words, the solar energy is one not for today, but also for tomorrow and future. In order to ensure our children, the future generation, to grasp the matter today and emphasize importance of it, we organize a painting contest under the title of “Electric Production Solar Energy and its Applications”.

Little clean energy-friends are working ...

Unfortunately, it is hard to say that sufficient attention is given to the renewable energies in our country. It may seem expensive and luxury at first sight. However, it is quite the contrary; firstly, the cost price is, maybe, under the costs in Europe. Secondly, the authorities also confirm that 1 unit investment made on the consumption side brings 3 units of savings on the production and transmission by the government. We felt it necessary to organize this campaign to make the society conscious about preservation of environment and independency of energy. Goal of the contest it to make the children, future generation of our country, well aware of the clean energies. In these days when prices of oil and natural gas for which our country is dependant on foreign sources are getting higher and higher and power failures are frequently on the agenda, we should bring forward and introduce matter of clean energy which is completely local, cost effective and infinite. We, Norm Enerji, have committed ourselves to do it, leading the way in this respect. Furthermore, we would be pleased if the children of our times who will shape the future of our country show great interest in such an organization. Interest shown by the today’s young people in the clean energy gives confidence in the future of Turkey. We receive positive and constructive s and contribution all parts of the society, particularly educators and guardians. By introducing to the children in the present day who will be grown-ups of the future of the future-oriented energies, we desire to make it known that they are applicable and accessible. Somehow it would also be appreciated by the grown-ups, wouldn’t it?

Theme of the contest is Solar Energy, Power Production the Sun. In fact, we do our best not to restrict it too much; what is important for us is to have access to more people and draw their attention to the matter. However, we receive designs and slogans that may envy the professional advertisers. It is quiet clear that the children monitor their environment very good and this proves how we are right in attaching importance to them.
